ADVANCED Potting Substrates: Combine crop security with sustainability

More alternative materials, the protection of valuable resources as well as the reduction of emissions and the use of local materials are as much a requirement today as the best technical performance for the crop. To meet all these demands we have used our more than 30 years of practical experience with alternative constituents – such as wood fibre, green compost, bark, perlite and coir – to develop a brand new portfolio of substrates: ADVANCED Container Substrates. This range does not only meet the requirements of modern horticulture, it sets a new standard in international horticulture.

Main features of our ADVANCED Substrates:

- Tried and tested recipes for utmost crop security
- Meet the latest requirements of professional horticulture
- Modern alternative constituents with positive properties
- Optimised product weight and loading volume
- Resource-saving through the use of alternative raw materials
- Significant reduction of emissions
- Peat only from responsibly managed sources with RPP certification

“Helleborus is a niche product. This is where the right substrate recipe is essential. We see great success with TerrAktiv® and GreenFibre® in our mixture. The plants are stronger, more compact and resistant. We are very grateful to have such a reliable partner in Klasmann-Deilmann.”

Thierry van Paemel, satisfied ADVANCED customer, co-owner of 'BVBA Helleborus',
a leading producer of Helleborus in Belgium

Some examples of convincing crop results with ADVANCED Potting Substrates

TS 4 Green Plant coarse + GreenFibre®

T89

Structure – coarse

pH-value (H₂O) – 6.0

Fertilisation (g/l) – 1.0

Extra trace elements – ✓

Water capacity – ++

Air capacity / drainage – +++++

Structural stability – +++++

Characteristics – Very high air capacity and drainage for best root development

Use for – Foliage plants, Anthurium, Calathea, Cyclamen

19% less CO₂*

*Compared to segment standard with 100% peat (rec. 681), verified in accordance with ISO 14064-1 standard

GreenFibre® medium

White peat fibres coarse-fibrous

White sod peat (25 – 45 mm)

Crop results (Rec. T89)

Practical findings:

- Plants cultivated in the substrate GreenFibre® showed superior root development
- Very low share of fine particles at the bottom of pots
- Fast and even water uptake in the ebb and flow irrigation system
- Liquid-feeding was carried out in line with common practice, no fixation of nitrogen occurred during cultivation

Ficus benjamina grown in TS 4 Green Plant coarse + GreenFibre® (The Netherlands)

GreenFibre®: Our premium wood fibre

- Specifically developed for the needs of modern horticulture
- Manufactured inhouse by Klasmann-Deilmann and fully RHP certified
- Made of virgin wood from responsibly managed sources
- Improves aeration and structural stability in substrates
- Stable nitrogen balance to suit normal feeding regime
- Low weight and low carbon footprint
- Very safe constituent and well available throughout the year

TS 4 PLUS medium + GreenFibre®

616

Structure – medium

pH-value (H₂O) – 6.0

Fertilisation (g/l) – 1.0

Extra trace elements – ✓

Water capacity – +++

Air capacity / drainage – +++

Structural stability – +++++

Characteristics – High structural stability and increased water retention

Use for – Ornamental plants, foliage plants

19% less CO₂*

*Compared to segment standard with 100% peat (rec. 608), verified in accordance with ISO 14064-1 standard

GreenFibre® medium

White peat, moderately decomposed (0 – 25 mm)

White sod peat (10 – 25 mm)

Crop results (Rec. 616)

Practical findings:

- Very positive results with sensitive varieties
- Increased drainage – easier water management
- Substrate surface remains drier, less problems with liverwort algae and sciarid flies
- Reduced occurrence of root diseases
- With a normal nitrogen-based liquid feeding scheme in line with common practice, no special feeding is required

Begonia Elatior hybrids potted in TS 4 PLUS medium + 20% GreenFibre® (The Netherlands)

Benefits of ADVANCED Potting Substrates with GreenFibre®

- Increased air capacity and long-term structural stability
- Better drainage, thus very healthy and fast root development
- Better water distribution in the substrate for easier rewetting
- Less algae and moss, due to drier substrate surface
- Low weight for reduced transport costs and less carbon emissions

More advanced product solutions for pot plants

TerrAktiv® PLUS: Microbially vitalised substrates for healthy plants

- ⊕ Better alternative to all common biostimulants
- ⊕ Strong microbial vitalisation of growing media
- ⊕ Higher resistance to soil-borne fungal infections and abiotic stress factors (e.g. nutrient deficiency, temperature and humidity fluctuations)
- ⊕ More robust and healthier crops with improved root growth
- ⊕ Suppression of mould
- ⊕ Improved nutrient release from organic fertilisers
- ⊕ May reduce need for mineral slow release fertilisers when used in combination with organic fertilisers

Find out more about
TerrAktiv® PLUS

Log & Solve®: The digital consulting platform

- ⊕ Safeguard the yield of your crops
- ⊕ Improve production efficiency and reduce crop failure
- ⊕ Monitor relevant cultivation parameters to anticipate crop issues
- ⊕ Gain data-based conclusions for faster problem solving
- ⊕ Share digital cultivation data with advisors for expert support
- ⊕ Log data about cultivation measures, observations from crop walks, pictures and more
- ⊕ Usable with smartphones

Log & Solve®

*“We were impressed that the company known for its peat substrates made the brave move to **ADVANCED** substrates. We were able to achieve good plant quality and the crop management was easy. It is required to adapt to the new substrate slightly, but Klasmann-Deilmann has never let us down in terms of quality and support.”*

Li Qiang,
satisfied **ADVANCED** customer,
managing director of 'Yunnan Yunshan' nursery in China
