Evolution of Growing Media

Welcome to your advance

ADVANCED Substrates set the benchmark for future-oriented horticulture. They combine the most valued raw materials to high performance blends with a low carbon footprint. Wood fibre, perlite, cocos, green compost and peat boost essential characteristics in the substrate, thus ensuring the precise crop control in your nursery and the healthy growth of your plants.

ADVANCED Substrates cover all plant and cultivation segments for any horticultural

application. The mixes are tried and tested and have proven their suitability for all internationally common applications in commercial horticulture.

Decades of experience with all major raw materials and the widest range of growing media give us a unique edge. That makes your next step easier. When you're ready to advance, we're ready to join you.

Frank Stolwijk, Satisfied ADVANCED customer
and owner of Stolwijk Plants in the Netherlands

“ADVANCED Substrates by Klasmann-Deilmann ...”

“... are the result of decades of research, development and experience. They guarantee the correct recipe for every crop, the best raw materials for every cultivation method, the highest quality for your nursery – and the use of highly sustainable resources for the environment and climate. We are convinced that more advanced means more success for your crops.”

Dr. Sebastian Kipp
Head of Advisory Services and Quality Management
at Klasmann-Deilmann

“... contain a proportion of alternative raw materials. We rely on proven constituents such as wood fibres, green compost, coir and perlite. The tried and tested recipes meet all requirements for pioneering horticulture. They combine maximum crop safety with reliable availability and a reduced carbon footprint.”

Anja Fritzen
Technical Advisor at Klasmann-Deilmann

K[®]
1913
we make it grow

“... are the next logical step on a path we have been following for more than thirty years. Modern raw materials create a wide range of options for meeting globally increasing demand for growing media. We offer more alternative constituents without compromising on quality. We are focusing on greater sustainability and consistently high crop security. The game-changing ADVANCED Substrates ensure that you stay abreast of one of the most important horticultural developments in recent decades.”

Moritz Böcking
Managing Director at Klasmann-Deilmann

ADVANCED Substrates

From coir to wood fibre: Modern constituents for your ADVANCED Substrate

Why GreenFibre®?

- GreenFibre® ...
- ... is a wood fibre from sustainably managed forestry and manufactured by ourselves
 - ... is a RHP certified raw material, specially developed for the needs of modern horticulture
 - ... leads to better aeration and higher structural stability
 - ... increases drainage in the root zone, thus less issues with waterlogging
 - ... improves the water distribution in the substrate
 - ... ensures easier rewetting of the substrate
 - ... enables a healthy and fast root development
 - ... ensures better drying off of the substrate surface, thus less pressure from root diseases
 - ... prevents algae and moss, due to drier substrate surface
 - ... provides a stable nitrogen balance to suit normal feeding regime

Why perlite?

- Perlite ...
- ... increases air capacity and drainage
 - ... prevents waterlogging
 - ... provides excellent structural stability
 - ... is pH-neutral and has an extremely low salt level
 - ... is ideal for use in substrates for propagation and potting when strong drainage and structural stability is required
 - ... is produced according to high quality standards in our own factory

Reduce CO₂ emissions significantly. With climate-friendly substrate blends

Read more

Bedding substrates

0% alternative constituents
(230 kg CO₂/m³)

30% alternative constituents
= 28% less CO₂ emissions

Container substrates

10% alternative constituents
(204 kg CO₂/m³)

40% alternative constituents
= 24% less CO₂ emissions

Why cocos products?

- Coir Pith ...
- ... shows good rewettability
 - ... supports a quick water uptake into the substrate
 - ... provides a balanced air-water ratio and good drainage
- Coco Fibre ...
- ... is characterised by a very high air capacity and low water capacity
 - ... provides a high capillarity for a very fast water transport within the root zone
 - ... supports the structural stability of a growing media
- Coir for organic growing ...
- ... is carefully washed and not treated with mineral fertilisers
 - ... carries the ecolabel IMO ensuring organic and ethical standards

Why TerrAktiv®?

TerrAktiv® green compost ...

- ... provides a high microbial activity
- ... shows suppressive effects on root diseases
- ... stimulates root development and plant growth
- ... acts as a slow-release nutrient source
- ... has a high buffering capacity
- ... improves shelf life of crops
- ... improves rewettability
- ... improves the nutrient release from organic fertiliser
- ... is certified to RHP quality standards and approved for organic cultivation

Certified to the highest standards

Sustainable growing media

We appreciate that you aim to manage your nursery responsibly also in terms of nature and climate protection. That's why ADVANCED Substrates offer you the maximum crop security while supporting your sustainable development.

By the use of alternative constituents, we optimise the characteristics of your substrate and reduce its carbon footprint at the same time. That leads to additional benefits such as ...

- ... more resource-saving cultivation through the use of more renewable raw materials
- ... lighter mixes and thus more environmentally friendly transport
- ... fewer emissions and therefore a more climate-friendly greenhouse
- ... increased microbial life and thereby stronger plants with less need for plant protection applications

Why Peat?

Peat ...

- ... remains the key constituent in substrate production
- ... enables the use of any other alternative raw material
- ... is well available long-term all year round
- ... provides uniform properties
- ... ensure a stable pH value and optimum nutrient level
- ... shows good buffering capabilities
- ... has a high structural stability and good wettability
- ... allows an optimum ratio between air and water capacity
- ... is free from pathogens or harmful substances and almost free from weed seeds

“In terms of quality and service, we have been very satisfied with Klasmann-Deilmann for decades. Alternative raw materials in the substrate do not change this. The opposite is the case. Our customers even expect it. And if the crops allow it, we would also be prepared to use 100% alternative raw materials. This simply fits the times and ties in perfectly with our company slogan: Leading Breeding!”

Markus Schmülling, Satisfied ADVANCED customer, Head of production “Geranien Endisch GmbH”, a leading producer of geranium and pot plants in Germany

ADVANCED Potting Substrates

Propagation Substrates

Seedling and tray substrates for the propagation of vegetable and ornamental young plants

Plug Mix + 20 % GreenFibre® 9U5

- Structure – fine
- pH-value (H₂O) – 6.0
- Fertilisation (g/l) – 0.5
- Extra trace elements – ✓

- Water capacity – +++
- Air capacity / drainage – ++++
- Water uptake – +++

- Characteristics – Provides increased air capacity and drainage
- Use for – Vegetable young plants, ornamental young plants

19% less CO₂*

*Compared to segment standard with 100% peat (rec. 408), verified in accordance with ISO 14064-1 standard

GreenFibre® fine White peat (0-5 mm) White sod peat (1-7 mm)

Seedling Substrate 080

- Structure – extra fine
- pH-value (H₂O) – 6.0
- Fertilisation (g/l) – 0.7
- Extra trace elements – ✓

- Water capacity – ++++
- Air capacity / drainage – ++
- Water uptake – ++++

- Characteristics – Best water uptake and reduced nutrition
- Use for – Salt-sensitive ornamental plants, e.g. Begonia, Impatiens

17% less CO₂*

*Compared to segment standard with 100% peat (rec. CKB), verified in accordance with ISO 14064-1 standard

Coir Frozen through black peat White sod peat (1-7 mm)

Base Substrate 1 fine + GreenFibre® 6X2

- Structure – extra fine
- pH-value (H₂O) – 6.0
- Fertilisation (g/l) – none
- Extra trace elements – ✓

- Water capacity – +++
- Air capacity / drainage – +++
- Water uptake – +++

- Characteristics – To mix with fertiliser on site or alongside liquid feed
- Use for – Vegetable young plants, ornamental young plants

9% less CO₂*

*Compared to segment standard with 100% peat (rec. 413), verified in accordance with ISO 14064-1 standard

GreenFibre® fine White peat (0-5 mm)

Tray Substrate + 10 % GreenFibre® 4Q7

- Structure – extra fine
- pH-value (H₂O) – 6.0
- Fertilisation (g/l) – 1.3
- Extra trace elements – ✓

- Water capacity – ++++
- Air capacity / drainage – ++
- Water uptake – ++++

- Characteristics – Universal tray substrate. Suitable for automatic filling lines
- Use for – Vegetable seedlings, tobacco seedlings

10% less CO₂*

*Compared to segment standard with 100% peat (rec. 060), verified in accordance with ISO 14064-1 standard

GreenFibre® fine Frozen through black peat White peat (0-5 mm)

TS 1 fine + GreenFibre® 6X3

- Structure – extra fine
- pH-value (H₂O) – 6.0
- Fertilisation (g/l) – 1.0
- Extra trace elements – ✓

- Water capacity – +++
- Air capacity / drainage – +++
- Water uptake – +++

- Characteristics – Extra light, free flowing seedling substrate. Suitable for automatic filling lines
- Use for – Vegetable young plants, ornamental young plants

9% less CO₂*

*Compared to segment standard with 100% peat (rec. 876), verified in accordance with ISO 14064-1 standard

GreenFibre® fine White peat (0-5 mm)

TS 1 fine + 15 % Perlite

419

Structure – extra fine
pH-value (H₂O) – 6.0
Fertilisation (g/l) – 1.0
Extra trace elements – ✓

Water capacity – +++
Air capacity / drainage – +++
Water uptake – +++

Characteristics – Extra light, free flowing, with improved drainage

Use for – Vegetable young plants, tobacco seedlings

9 %
less CO₂*

*Compared to segment standard with 100% peat (rec. 876), verified in accordance with ISO 14064-1 standard

○ Perlite coarse (1 – 7.5 mm) ● White peat (0 – 5 mm)

TS 3 fine + 20 % GreenFibre®

5Q4

Structure – extra fine
pH-value (H₂O) – 6.0
Fertilisation (g/l) – 1.3
Extra trace elements – ✓

Water capacity – ++++
Air capacity / drainage – +++
Water uptake – ++++

Characteristics – Good water retention combined with improved porosity

Use for – Vegetable young plants, ornamental young plants

17 %
less CO₂*

*Compared to segment standard with 100% peat (rec. 316), verified in accordance with ISO 14064-1 standard

● GreenFibre® fine ● Frozen through black peat ● White peat, moderately decomposed (0 – 5 mm)

TS 2 fine + 10 % Perlite

S39

Structure – extra fine
pH-value (H₂O) – 6.0
Fertilisation (g/l) – 2.0
Extra trace elements – none

Water capacity – +++
Air capacity / drainage – +++
Water uptake – +++

Characteristics – For young plants with high nutrient demand and for growing conditions with frequent irrigation

Use for – Vegetable seedlings, tobacco seedlings

6 %
less CO₂*

*Compared to segment standard with 100% peat (rec. 424), verified in accordance with ISO 14064-1 standard

○ Perlite coarse (1 – 7.5 mm) ● White peat (0 – 5 mm)

TS Steckmedium with 25 % perlite + 25 % coir

T30

Structure – extra fine
pH-value (H₂O) – 6.0
Fertilisation (g/l) – 0.5
Extra trace elements – ✓

Water capacity – +++
Air capacity / drainage – +++
Water uptake – ++++

Characteristics – Rooting cuttings in small trays and small paper pots

Use for – Ornamental plants

34 %
less CO₂*

*Compared to segment standard with 100% peat (rec. N51), verified in accordance with ISO 14064-1 standard

○ Perlite fine (0.6 – 2.5 mm) ● Coir ● White peat (0 – 5 mm)

TS 3 fine + 10 % GreenFibre®

1R1

Structure – extra fine
pH-value (H₂O) – 6.0
Fertilisation (g/l) – 1.0
Extra trace elements – ✓

Water capacity – ++++
Air capacity / drainage – ++
Water uptake – +++

Characteristics – Seedling mix with increased water capacity

Use for – Vegetable young plants, ornamental young plants

9 %
less CO₂*

*Compared to segment standard with 100% peat (rec. 416), verified in accordance with ISO 14064-1 standard

● GreenFibre® fine ● White peat, moderately decomposed (0 – 5 mm)

TS Steckmedium

686

Structure – fine
pH-value (H₂O) – 6.0
Fertilisation (g/l) – 0.5
Extra trace elements – ✓

Water capacity – ++
Air capacity / drainage – ++++
Water uptake – +++

Characteristics – Rooting cuttings in modular trays, small pots and paper pots

Use for – Ornamental plants, shrubs and trees

14 %
less CO₂*

*Compared to segment standard with 100% peat (rec. N51), verified in accordance with ISO 14064-1 standard

○ Perlite coarse (1 – 7.5 mm) ● White sod peat (1 – 7 mm)

● GreenFibre® fine ● Frozen through black peat

Structure – fine
pH-value (H₂O) – 6.0
Fertilisation (g/l) – 1.5
Extra trace elements – ✓

Water capacity – + + + + +
Air capacity / drainage – +
Water uptake – + + + + +

Characteristics – Provides extra water retention, suitable for sowing in trays

Use for – Vegetable seedlings, tobacco seedlings

9%
less CO₂*

*Compared to segment standard with 100% peat (rec. 076), verified in accordance with ISO 14064-1 standard

“I immediately liked GreenFibre®. The tray substrate absorbs the water better and we can water a little less. This also means we have fewer problems with dry areas in the trays. The crops develop more uniformly, which is why GreenFibre® is now consistently used by us. In addition, we should think about the use of our planet’s resources. GreenFibre® can do a lot to conserve valuable peat raw materials.”

Patrick Limousin, Satisfied ADVANCED customer and owner of EARL Limousin, a leading producer of vegetable young plants in France

ADVANCED Propagation Substrates

Blocking Substrates

Substrates for the propagation of ornamental and vegetable young plants in press pots

Potgrond H80 + GreenFibre® 479

Structure – fine
pH-value (H₂O) – 6.0
Fertilisation (g/l) – 1.5
Extra trace elements – none

Water uptake – +++++
Water capacity – +++++
Block stability – +++++

Characteristics – Good block stability also for larger press pots
Use for – Vegetable young plants

17% less CO₂*
*Compared to segment standard with 100% peat (rec. 051), verified in accordance with ISO 14064-1 standard

GreenFibre® fine Frozen through black peat

Potgrond H85 + GreenFibre® 078

Structure – fine
pH-value (H₂O) – 6.0
Fertilisation (g/l) – 1.5
Extra trace elements – none

Water uptake – +++++
Water capacity – +++++
Block stability – +++++

Characteristics – Produces very strong blocks
Use for – Vegetable young plants, ornamental young plants

14% less CO₂*
*Compared to segment standard with 100% peat (rec. 030, rec. 002), verified in accordance with ISO 14064-1 standard

GreenFibre® fine Frozen through black peat

“GreenFibre® fine helps to form very stable press pots that absorb water quickly. The irrigation water uses GreenFibre® like canals and thus easily distributes within the press pots. The rapid root development is also convincing. The plants have a healthy root ball and show excellent growth properties. This results in very strong and homogeneously grown young plants.”

Dr. Sebastian Kipp, Head of Advisory Services and Product Development, Klasmann-Deilmann (Germany)

„We started with 10 % GreenFibre® in our blocking substrates and then increased the proportion to 20 %. This prevents excessive shrinkage of the press pots and simplifies drying after watering. We do not see any difference in the press pot stability. But we get much more intensive root development. With healthy, white root hairs. GreenFibre® is innovative and allows us to become more environmentally friendly.”

Emmanuel Cellier, Satisfied ADVANCED customer and owner of Cellier Plants,
a leading producer of young plants in France

● GreenFibre® medium ● White peat, moderately decomposed (0–25 mm)

“GreenFibre® allows the substrate surface to dry off faster. Algae formation is no longer an issue and crops are less susceptible to diseases. Especially in ebb and flow systems, the substrate draws water very quickly and distributes it well throughout the root ball.”

Anja Fritzen, Technical Advisor, Klasmann-Deilmann (Germany)

Structure – medium
pH-value (H₂O) – 6.0
Fertilisation (g/l) – 1.2
Extra trace elements – ✓

Water capacity – ++
Air capacity / drainage – ++++
Structural stability – ++++

Characteristics – Allround potting mix with increased drainage and air capacity

Use for – Ornamental plants, Cyclamen, Geranium, perennials

38 %
less CO₂*

*Compared to segment standard with 100% peat (rec. DKV), verified in accordance with ISO 14064-1 standard

“Helleborus is a niche product. This is where the right substrate recipe is essential. We see great success with TerrAktiv® and GreenFibre® in our mixture. The plants are stronger, more compact and resistant. We are very grateful to have such a reliable partner in Klasmann-Deilmann.”

Thierry van Paemel, Satisfied ADVANCED customer

Co-owner of BVBA Helleborus, a leading producer of Helleborus in Belgium

Container Substrates

Substrates for growing on of shrubs and trees as well as ericaceous crops

TS 4 PLUS coarse + GreenFibre®

620

- Structure – coarse
- pH-value (H₂O) – 6.0
- Fertilisation (g/l) – 1.0
- Extra trace elements – ✓

- Water capacity – +++
- Air capacity / drainage – +++
- Structural stability – ++++

- Characteristics – Allround container substrate with increased water retention
- Use for – Shrubs and trees, foliage plants

18%
less CO₂*

*Compared to segment standard with 100% peat (rec. 609), verified in accordance with ISO 14064-1 standard

GreenFibre® medium White peat, moderately decomposed (0-25 mm) White sod peat (10-25 mm) White sod peat (25-45 mm)

Container Substrate 2 coarse with 10 % TerrAktiv® + 25 % GreenFibre®

6X9

- Structure – coarse-fibrous
- pH-value (H₂O) – 5.7
- Fertilisation (g/l) – none
- Extra trace elements – ✓

- Water capacity – ++
- Air capacity / drainage – ++++
- Structural stability – ++++

- Characteristics – Extra water and nutrient buffer plus strong microbial activity
- Use for – for healthy plants Trees, conifers

30%
less CO₂*

*Compared to segment standard with 100% peat (rec. 250), verified in accordance with ISO 14064-1 standard

TerrAktiv® GreenFibre® coarse Frozen through black peat Peat fibres White sod peat (25-45 mm)

TS 4 PLUS coarse + 30 % GreenFibre®

P24

- Structure – coarse
- pH-value (H₂O) – 5.5
- Fertilisation (g/l) – 1.0
- Extra trace elements – ✓

- Water capacity – +++
- Air capacity / drainage – +++
- Structural stability – ++++

- Characteristics – High structural stability and increased drainage
- Use for – Shrubs and trees, foliage plants

28%
less CO₂*

*Compared to segment standard with 100% peat (rec. 609), verified in accordance with ISO 14064-1 standard

GreenFibre® medium White peat, moderately decomposed (0-25 mm) White sod peat (10-25 mm) White sod peat (25-45 mm)

TS 4 coarse + 20 % GreenFibre®

1G8

- Structure – coarse
- pH-value (H₂O) – 5.5
- Fertilisation (g/l) – 1.0
- Extra trace elements – ✓

- Water capacity – ++
- Air capacity / drainage – ++++
- Structural stability – ++++

- Characteristics – Allround container substrate with good capillary distribution
- Use for – Shrubs and trees, foliage plants

19%
less CO₂*

*Compared to segment standard with 100% peat (rec. 604), verified in accordance with ISO 14064-1 standard

GreenFibre® medium White peat (0-25 mm) White sod peat (10-25 mm) White sod peat (25-45 mm)

TS 4 Ericaceous + GreenFibre®

254

- Structure – medium
- pH-value (H₂O) – 4.8
- Fertilisation (g/l) – none
- Extra trace elements – ✓

- Water capacity – ++
- Air capacity / drainage – ++++
- Structural stability – ++++

- Characteristics – For crops with acidic soil requirements
- Use for – Ericaceous plants, Gardenia, Camelia, Gaultheria

19%
less CO₂*

*Compared to segment standard with 100% peat (rec. 214), verified in accordance with ISO 14064-1 standard

GreenFibre® medium White peat (0-25 mm) White sod peat (10-25 mm)

A large greenhouse filled with rows of young green plants in black containers. Two men are standing in the aisle, looking at each other. The man on the left is wearing a blue t-shirt and khaki shorts, holding a plant in a black container. The man on the right is wearing a grey polo shirt and blue jeans, also holding a plant in a black container. The greenhouse has a high ceiling with a complex metal structure and translucent panels.

„In recent years we have been confronted with customers asking for more ecologically responsible substrates. Supported by Klasmann-Deilmann we have achieved to use 20% GreenFibre® in our crops. I feel this has a positive contribution to our crop management, as we get a better water balance and the substrate is easier to rewet.”

Lode De Waele, Satisfied ADVANCED customer, Owner “De Waele Handelskwekerij BVBA”,

ADVANCED Container Substrates

Soft Fruit Substrates

Substrates for a sustainable cultivation of blueberries, strawberries and other soft fruit

TS 4 medium Blueberry with perlite + coco fibre

V58

- Structure – coarse
- pH-value (H₂O) – 4.8
- Fertilisation (g/l) – 0.3
- Extra trace elements – ✓

- Water capacity – ++
- Air capacity / drainage – ++++
- Structural stability – +++++

- Characteristics – Fruit production in containers up to 100 L. Strong drainage for outdoor cultivation. Suitable also with irrigation water high in EC
- Use for – Blueberry

38 %
less CO₂ *

*Compared to segment standard with 100% peat (rec. 602), verified in accordance with ISO 14064-1 standard

○ Perlite coarse (1 - 7.5 mm) ● Coco fibres ● Peat fibres ● White sod peat (10 - 25 mm)

TS 1 medium Blueberry propagation

382

- Structure – medium
- pH-value (H₂O) – 4.8
- Fertilisation (g/l) – 0.3
- Extra trace elements – ✓

- Water capacity – +++
- Air capacity / drainage – +++
- Structural stability – +++++

- Characteristics – For propagation in pots and large modular trays
- Use for – Blueberry young plants

25 %
less CO₂ *

*Compared to segment standard with 100% peat (rec. 085), verified in accordance with ISO 14064-1 standard

○ Perlite coarse (1 - 7.5 mm) ● GreenFibre® medium ● White sod peat (5 - 15 mm) ● White peat (0 - 25 mm)

TS 4 coarse Blueberry with coir + 20 % Perlite

979

- Structure – coarse-fibrous
- pH-value (H₂O) – 4.8
- Fertilisation (g/l) – none
- Extra trace elements – ✓

- Water capacity – ++
- Air capacity / drainage – ++++
- Structural stability – +++++

- Characteristics – Indoor and outdoor cultivation in containers up to 100 L. High structural stability with optimal water and air capacity
- Use for – Blueberry

28 %
less CO₂ *

*Compared to segment standard with 100% peat (rec. 604), verified in accordance with ISO 14064-1 standard

○ Perlite coarse (1 - 7.5 mm) ● Coir ● White peat fibres (0 - 70 mm) ● White sod peat (25 - 45 mm)

TS 4 medium Blueberry with perlite + coir

Z33

- Structure – medium
- pH-value (H₂O) – 4.8
- Fertilisation (g/l) – 0.3
- Extra trace elements – ✓

- Water capacity – ++
- Air capacity / drainage – ++++
- Structural stability – +++++

- Characteristics – Fruit production in containers > 2 L. Provides stable air capacity and drainage
- Use for – Blueberry

30 %
less CO₂ *

*Compared to segment standard with 100% peat (rec. 602), verified in accordance with ISO 14064-1 standard

○ Perlite coarse (1 - 7.5 mm) ● Coir ● White peat (0 - 25 mm) ● White sod peat (10 - 25 mm)

TS 4 coarse Blueberry with perlite + GreenFibre®

U55

- Structure – coarse-fibrous
- pH-value (H₂O) – 4.8
- Fertilisation (g/l) – 0.3
- Extra trace elements – ✓

- Water capacity – +
- Air capacity / drainage – ++++
- Structural stability – +++++

- Characteristics – Indoor and outdoor cultivation in containers up to 100 L. Ideal for use also with high EC irrigation water and areas with heavy rain fall
- Use for – Blueberry

32 %
less CO₂ *

*Compared to segment standard with 100% peat (rec. 604), verified in accordance with ISO 14064-1 standard

○ Perlite coarse (1 - 7.5 mm) ● GreenFibre® medium ● White peat fibres (0 - 70 mm) ● White sod peat (10 - 25 mm)

A photograph of three men in a greenhouse. One man on the left wears a straw hat and a grey shirt. A man in the center, with a beard and light blue shirt, holds an open brochure. A third man on the right, wearing glasses and a light blue shirt, points at the brochure. The background shows the structure of the greenhouse with translucent panels.

“The use of GreenFibre®, perlite and coco fibre in our blueberry substrates leads to a very porous and open structure in the root zone. As a result, plants develop more roots due to better drainage even with heavy rainfall. Also in the long term there is no shrinkage, the root ball remains drier and does not tend to get muddy.”

Michel Lopez, Technical Advisor, Klasmann-Deilmann France

ADVANCED Blueberry Substrates

TS 1 medium basic Strawberry with 50 % GreenFibre®

X68

GreenFibre® medium White peat (0-25 mm)

Structure – medium
pH-value (H₂O) – 5.7
Fertilisation (g/l) – 0.5
Extra trace elements – ✓

Water capacity – ++
Air capacity / drainage – ++++
Structural stability – ++++

Characteristics – Yearround strawberry cultivation in rack systems. Perfectly suitable for protected cultivation due to well balanced water and air capacity

Use for – Strawberry in gutter systems

46 %
less CO₂*

*Compared to segment standard with 100% peat (rec. 085), verified in accordance with ISO 14064-1 standard

TS 4 medium Strawberry with 25 % coir + 25 % GreenFibre®

Y77

GreenFibre® medium Coir White peat (0-25 mm) White sod peat (10-25 mm)

Structure – medium
pH-value (H₂O) – 5.7
Fertilisation (g/l) – 0.5
Extra trace elements – ✓

Water capacity – ++
Air capacity / drainage – ++++
Structural stability – ++++

Characteristics – Single and double cropping strawberries on rack system, in troughs and containers

Use for – Strawberry, raspberry and other soft fruit

43 %
less CO₂*

*Compared to segment standard with 100% peat (rec. 602), verified in accordance with ISO 14064-1 standard

Container Substrate 3 Soft Fruit coir

237

Coco fibres Coir pith, buffered

Structure – medium-fibrous
pH-value (H₂O) – 6.2
Fertilisation (g/l) – none
Extra trace elements – ✓

Water capacity – +++
Air capacity / drainage – ++++
Structural stability – ++++

Characteristics – Fully coir based solution with good structural stability and drainage

Use for – Strawberry, raspberry and other soft fruit

87 %
less CO₂*

*Compared to segment standard with 100% peat (rec. 250), verified in accordance with ISO 14064-1 standard

“Our substrates with GreenFibre® for strawberries in gutters have proven to be a great alternative to coir. GreenFibre® ensures structural stability and drainage also for perennial cultivation. Moreover, GreenFibre® leads to a lower substrate weight and less CO₂ emissions. As a renewable raw material, it is locally sourced from sustainably managed forestry and well available all year.”

Frank Lenkens, Soft Fruit Specialist, Klasmann-Deilmann Benelux (Netherlands)

ADVANCED Strawberry Substrates

ADVANCED Substrates – The forms of supply

Our substrates are available in following standard forms

Packaged goods:
70-litre-bags

Big Bales
2.5 – 6.0 m³

Packaged goods:
210-litre-bags

Bulk

For all growing media manufactured by Klasmann-Deilmann, the volume is measured in accordance with European Standard EN 12580. The standard lays down the procedure to be used for measuring the volume of growing media and other peat products which are supplied in bulk or as packaged products. The quantity indication generally relates to the quantity at the time of production.

Average substrate consumption for different pot sizes

| Pot size ø in cm | Substrate requirement in l for 1,000 pots** | Number of pots per m³ substrate* |
|------------------|---|----------------------------------|
| 6 | 130 – 160 | 6900 |
| 8 | 230 – 280 | 3,920 |
| 9 | 330 – 380 | 2,820 |
| 9 x 9 x 9,5 | 600 – 650 | 1,600 |
| 10 | 460 – 510 | 2,060 |
| 10 x 10 x 11,5 | 920 – 970 | 1,050 |
| 11 | 670 – 720 | 1,440 |
| 12 | 880 – 930 | 1,150 |
| 13 | 1,100 – 1,200 | 870 |
| 1.5 l cont. | 1,700 – 2,000 | 540 |
| 2.0 l cont. | 2,300 – 2,600 | 410 |

* Average figures only, based on the volume as per EN 12580. Variations may arise in particular through different pot types, varying substrate moisture levels and the compression during potting. The size of the seedling root ball also has a significant impact.

More advanced product solutions

Containermulch

Containermulch is an environmentally friendly top dressing for pots and containers to prevent the growth of algae and weeds. It is made of softwood from sustainably managed forests (PEFC-certified). The wood has been thermally treated to avoid phytosanitary risks.

It is fast drying, permeable to water and breaks up water drops, so the top layer does not become air-tight. This makes it more difficult for algae, mosses and weeds to grow. By using Containermulch, the substrate moisture remains more homogeneous and the plants also look visually appealing for marketing. Containermulch can be processed mechanically with all automatic spreaders and is also very suitable for mulching planting beds.

Containermulch

Find out more
about Growcoon

Growcoon

Growcoon is a biodegradable propagation plug with a stable but flexible open net structure. The Growcoon forms a stable root ball when used in combination with a high-quality seedling substrate. It is the optimal system for all types of propagation methods. It proves to be particularly effective in sowing, rooting of cuttings, grafting and growing-on of young plants from tissue culture as well as in vertical farming and hydroponic systems. It is available in many different standard sizes and suitable for all common tray sizes. In addition, there is a special Growcoon range for hydroponics.

Find out more about
Log & Solve

Log & Solve

Log & Solve is a digital tool for growers to collect relevant cultivation data in a central web-based platform. The new Log & Solve dashboard allows better insight in your crop to increase the efficiency of cultivation.

Log & Solve supports growers in their crop management by using analytical data and sensor data. It organises all crop-related information which is then automatically bundled, evaluated and graphically visualised. On this basis, undesirable developments in crops can be identified and averted more quickly.

The Klasmann-Deilmann Group

Klasmann-Deilmann is the leading group of companies in the international substrate industry with numerous sales and production companies in Europe, Asia and America, as well as a network of sales and production partners on all continents. Our growing media provide a vital basis for the growth of vegetables, fruit, edible mushrooms, herbs, ornamental plants, trees and shrubs. They ensure the success of our partners and customers in commercial horticulture and are an essential part of the value chain in the food industry.

Our product portfolio includes growing media and substrate constituents such as peat, wood fibre, green compost, cocos and perlite amongst others. We also market the Growcoon propagation system and are establishing ourselves as a provider of digital solutions for nurseries with the Log & Solve online platform.
